What is CARE?

The University of Georgia's Cognitive Aging Research and Education (CARE) Center is a clinical, research, and outreach space where we deliver education on dementia risk reduction, conduct cutting-edge research, and provide planning and support for persons with dementia and their care partners. The CARE Center has teamed up with Statesboro's Rockin' Out Alzheimer's Disease (ROAD) Foundation to hold a community forum and expert panel with an expert health educator from the University of Georgia (UGA) for people in Bulloch and the surrounding counties who are concerned about brain health, recently diagnosed with, or caring for family and loved ones with Alzheimer's disease or related dementia. CARE aims to reduce crises for persons living with these diseases and improve access to dementia diagnosis, education, and support.
