

*Pollinators in Peril*Planet in Peril*People in Peril*

**Your pollineighbors need
YOU!**

Over the past 20 years a family of pesticides called neonicotinoids have become the most widely used pesticides world-wide.

These are systemic, water soluble compounds that are thousands of times more toxic for lower level life forms than anything that has come before. They have poisoned the environment widely and while of course we were assured of their safety, we are beginning to see human health problems, particularly for children.

**Come hear legendary beekeeper Tom Theobald
talk about what the science is telling us,
and find out how you can help!**

**Wednesday, November 8, 2017 7:00-8:30pm
Longmont Public Library Meeting Rooms
FREE; please RSVP—aleahf@gmail.com**
